

# Portable Mat Washing Unit

## Start on Solid Ground

**Strad** is committed to helping develop North America's resources responsibly and safely. To do this, Strad has continually worked to provide customers with **superior solutions and services** in the energy industry. Strad's Environmental and Access Matting Solution is just one area where we have made a name for ourselves as the leader for innovative and reliable matting services and products.

Our team provides a closed-loop mat washing system to combat strict environmental concerns customers may have when renting mats or moving them from one site to the next. This state-of-the-art portable mat washing unit is capable of cleaning a variety of mats such as crane mats, wood mats and rig mats that can be anywhere from 4 feet wide to 40 feet long.

## Features

- Cleaning unit with settling tank, recycling unit, water supply, disposal bin, generator, light tower, and floc tanks
- Cleans a wood access mat in 4 minutes and a rig mat in 8 minutes
- 4 levels of filtration
- Add disinfectant at varying percentages to help clean mats
- Presoak option to remove debris quicker

## Advantages

- Closed-loop recycling process
- Extends life of mat through better care
- Clean mats makes for fewer truckloads and lighter shipments
- Portable onsite cleaning capabilities
- Quick turnaround time
- Full service and all season
- Prevents contamination and the spreading of clubroot
- Cleaner worksite

## Level 1 Mechanical Cleaning

- Minimum standard for mats that soil or plant materials may adhere to
- Removes dust, soil and plant materials by scraping, brushing, sweeping or using compressed air to blow off all visible remaining soil or plant materials
- Completed in dry/dusty conditions where soil is sparse

## Level 2 Washing

- Thoroughly wash the mats with a pressure washer to remove all remaining plant materials and soil particles
- Completed in wet or muddy conditions when soil accumulation is heavier

## Level 3 Disinfection

- Should occur after all soil and plant debris is removed
- Requires spraying all accessible surfaces that contact soil with a 2% bleach solution
- All surfaces must be kept moist for 15 minutes to allow the disinfectant to destroy clubroot
- Level 3 should follow either a Level 1 Mechanical Clean or a Level 2 Wash
